

Welcome to ZipDeploy - FTP Unzip!

As you reached the ZipDeploy homepage, you must have fallen in the FTP trap for the multiple files upload websites. What you need is ZipDeploy - a FTP upload accelerator that performs an unzip on remote server. The Problem : multiple files . . . The Solution: ZipDeploy !

Uploading multiple files to a web site hosted remotely, somewhere on the Internet, can be a disgusting job. Transfer speed is not the issue: the actual number of files to be transferred is.

The same problem with emails: do you spend time to attach multiple (say, 100) files to send them to a friend? I guess not. You probably Zip them. So, why shouldn't one do the same with FTP transfers? Upload, and FTP unzip them. Unzip server side!

ZipDeploy is set to change all that ...

ZipDeploy is different from the normal FTP transfer program. For a start, it's as simple as possible. It's a wizard. It lets you unzip through FTP - simply said- upload and unzip, or unzip via FTP.

ZipDeploy has been developed for the masses. It's ridiculously easy to install and use. And last but not least... ZipDeploy is SuperFast!

ZipDeploy features:

- Outstanding upload speed (100% to 1000% faster than regular FTP transfers)
- A trivial wizard-like interface, thus being accessible to inexperienced users too
- Maximum automation (you enter your connection details then just press Next >)
- Multi-platform availability (Windows and Linux for the moment)
- Basic directory management of the website
- Detailed reporting generated on site.

For ZipDeploy customers:

- Flexible licensing
- Customer support
- Free upgrades
- One license for any supported OS (Windows and Linux for the moment)Try ZipDeploy. Download it now and test its amazing speed !
