

compatible with ZipDeploy

Not all websites are able to run the special commands ZipDeploy issues to them. Due to the large variety of server environments in the Internet, ZipDeploy will not run on all configurations. Though, about 80% of servers support ZipDeploy. Does my hosting provider support ZipDeploy acceleration?

We simply don't know. You will have to try. Get the trial version of ZipDeploy and make a test run!
WARNING!

When running ZipDeploy for (such) a test, **DO NOT DEPLOY IN THE ROOT DIRECTORY** unless your website is empty or its contents are dispensable. Create a test "sandbox" directory and play around there. We don't want to ruin your site. Read the disclaimer .

One other thing! ZipDeploy overwrites files .
