

disclaimer

- The improper use ZipDeploy , or
- The use of ZipDeploy in an incompatible environment, or

- The nature of files contained in the Zip package you upload (i.e. .htaccess files, or erroneous server-side scripts), or
- The improper set up of the server environment

may cause

- your web page to stop responding , or
- overwriting of your old files
- loss of content

in the directory you are deploying.

This is why we recommend deploying in a test directory as described in the "compatible-with-zipdeploy" page. In case you are asking for an error follow-up please read our privacy statement .
